WADA YASUO**(54) SCHEDULE MANAGEMENT DEVICE****(57)Abstract:**

PURPOSE: To make schedule time clearly recognizable in a unit smaller than a displayed unit even when the schedule time is displayed for instance, in hours by changing the displaying forms of the front end and rear end of the graph for displaying the starting time and ending time of the schedule time from each other.

CONSTITUTION: When the starting and ending time of the schedule of a person is displayed by a graph using hours, the displaying forms of the front and rear ends of the graph respectively indicating the starting and ending time of the schedule are changed from each other. Therefore, the starting time can be recognized easily in a unit which is smaller than one hour even when the schedule time is displayed by the graph using hours. For example, the schedule time is displayed by a graph which can be distinguishable by 30 minutes and the displaying form for every hour on the hour is changed from that for the middle points between every hour. Therefore, whether a schedule is started or ended from or at 30 minutes past a certain hour on the hour or from or at a certain hour on the hour can be recognized clearly. Thus a schedule time can be recognized clearly in minutes even when the schedule time is displayed in hours.
